

## WHERE ON EARTH ARE THEY CREATING UNDERWATER LASER SYSTEMS THAT CAN DETECT EXPLOSIVES ON SHIPS ENTERING U.S. HARBORS?

**IN FLORIDA. INNOVATION HUB OF THE AMERICAS.**<sup>SM</sup>

Marine scientists in Florida have developed a system that uses side-scanning lasers to detect explosives and other contraband attached to the hulls of ships. The device generates 3-D images within minutes, and can also be used to scan the seafloor for mines and sunken vessels.
